Fern Green Glass Wall Light

Installation & care guide · Aussie Lights

Before you start

- This is a hardwired wall light. In Australia it must be installed by a licensed electrician.
- Turn off the power at the switchboard before installation, cleaning or maintenance.
- Check that the wall can safely hold the light, and use fixings suited to your wall.
- Indoor use in dry areas only.
- Unpack the glass shade on a soft surface and handle it with care.

In the box

- Brass wall light with Ø 12 cm wall plate, 13 cm arm and E27 lampholder with switch on the socket
- Ø 19 cm green glass shade
- Mounting bracket and screws

Installation steps

1. Check that nothing is missing or damaged before the electrician arrives.
2. Decide the height: the centre of the wall plate about 150 to 170 cm from the floor in a hallway or living room, or about 30 cm above the mattress beside a bed. For a pair, keep the same height on both sides.
3. Your electrician fixes the mounting bracket to the wall over the electrical point, checking it is level.
4. Your electrician connects the wall light to the mains wiring (active, neutral and earth).
5. Fit the light onto the bracket and tighten the fixing screws. Fit an E27 LED globe (warm white recommended), then place the glass shade in the holder and tighten the three shade screws gently by hand, without forcing them on the glass.

6 Angle the shade where you want the light, restore power and test it with the switch on the socket.

Care

- Switch off and let the light cool, then dust the brass with a soft dry cloth.
- Clean the glass shade with a soft cloth and a little glass cleaner, once removed from the light.
- Do not use abrasive cleaners on the brass: it is a living finish that may slowly darken over time.
- To change the globe, switch off, let it cool, loosen the shade screws, remove the shade and replace the E27 LED globe.
- Contact us if you have any issue with the light.
