Ines Double Glass Wall Light

Installation & care guide · Aussie Lights

Before you start

- This is a hardwired wall light. In Australia it must be installed by a licensed electrician.
- Turn off the power at the switchboard before installation, cleaning or maintenance.
- Check that the wall can safely hold the light. Use the screws and wall plugs suited to your wall (plasterboard, brick or timber).
- Indoor use in dry areas only (IP20). In a bathroom, keep it outside the shower and bath zones.
- The glass shades are fragile: unpack them on a soft surface and handle them with both hands.

In the box

- Metal wall light body with round wall plate and two lamp holders
- Two glass shades (upper cylinder and lower dome)
- Mounting bracket, screws and wall plugs

Installation steps

1. Unpack every part on a soft surface and check that nothing is missing or damaged before the electrician arrives.
2. Mark the height: the centre of the wall plate is usually 160 to 180 cm from the floor in a hallway or living room, or about 120 to 150 cm beside a bed.
3. Fix the mounting bracket to the wall with the supplied screws, centred over the electrical outlet.

4. Your electrician connects the light to the mains wiring (active, neutral and earth).
5. Fit the wall plate over the bracket and tighten the side screws.
6. Screw an SES (E14) LED globe into each lamp holder.
7. Fit the upper glass and the lower glass and tighten each by hand, without forcing. Restore power and test the light.

Care

- Switch off and let the light cool, then dust with a soft dry cloth.
- Wash the glass shades in lukewarm soapy water, rinse and dry them fully before refitting. Do not use solvents or abrasive cleaners on the metal finish.
- Use LED globes of the same fitting (SES E14). Contact us if you have any issue with the light.
