Ignis Torch Wall Light

Installation & care guide · Aussie Lights

Before you start

- This is a hardwired wall light. In Australia it must be installed by a licensed electrician.
- Turn off the power at the switchboard before installation, cleaning or maintenance.
- Check that the wall can safely hold the light. Use screws and wall plugs suited to your wall (plasterboard, brick or timber).
- Indoor use in dry areas only. In a bathroom, keep it outside the shower and bath zones.
- The fluted glass shades are fragile: unpack the light on a soft surface and handle it with both hands.

In the box

- Gold-tone metal wall light with one or two fluted glass shades (depending on the model)
- Mounting bracket, screws and wall plugs

Installation steps

1. Unpack the light on a soft surface and check that nothing is missing or damaged before the electrician arrives.
2. Mark the height: the centre of the light is usually 160 to 180 cm from the floor in a hallway or living room, or about 120 to 150 cm beside a bed.
3. Fix the mounting bracket to the wall with the supplied screws, centred over the electrical outlet. Check that it is level.

4. Your electrician connects the light to the mains wiring (active, neutral and earth).
5. Fit the wall plate over the bracket and tighten the screws. Fit an LED globe matching the lamp holder into each holder, slide the glass shades into their cups, then restore power and test the light.

Care

- Switch off and let the light cool, then dust with a soft dry cloth.
- Wipe the glass shades with a soft cloth lightly dampened with glass cleaner. Do not use solvents or abrasive cleaners on the metal finish.
- Use LED globes matching the lamp holder. Contact us if you have any issue with the light.
