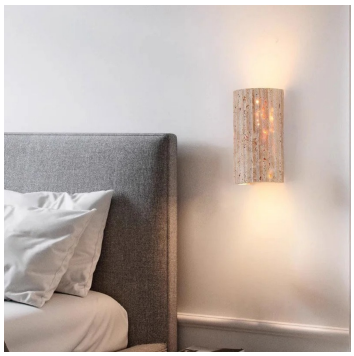
# Talia Fluted Travertine Wall Light

Installation Guide



### In the box

1 x fluted travertine light with integrated LED · 1 x slim mounting bracket · terminal block · 2 x small fixing screws · screws and wall plugs

### You will need

Drill, screwdriver, pencil and spirit level. No globe needed: the LED is built in. Suggested height: centre about 120 to 140 cm from the floor beside a bed, 150 to 170 cm in a living room or hallway.

### Important safety information

- This light must be installed by a licensed electrician, in line with AS/NZS 3000 (Wiring Rules) and local regulations.
- Turn the power off at the switchboard before installing, cleaning or servicing the light.
- Use screws and wall plugs suited to your wall (plasterboard, timber or masonry).
- Indoor, dry areas only.
- Natural travertine is fragile: handle the light with care and never over-tighten the screws.

## Step by step

1. **Remove the mounting bracket**
   Undo the two small screws at the top and bottom of the light and lift off the slim mounting bracket. Keep the screws.
2. **Mark and drill**
   Hold the bracket against the wall, check it is straight with a spirit level and mark the holes. Check for hidden pipes or cables, then drill at the marks.
3. **Fix the bracket**
   Push the wall plugs into the holes and screw the bracket upright and firmly to the wall, with the supply cable beside it.
4. **Connect the wiring**
   With the power OFF, connect the supply to the light through the terminal block: Active to L, Neutral to N, and Earth to the earth terminal if one is fitted. Tuck the wires in.
5. **Fit the light**
   Slide the light down over the bracket so it sits flat against the wall, then refit the two small screws at the top and bottom. Tighten by hand only.
6. **Test**
   Restore the power at the switchboard and switch on the light.

### Care and cleaning

Turn the light off and let it cool. Dust the stone with a soft, dry cloth. Do not use water, chemical solvents or abrasive cleaners on the travertine.
