Kauri Linear Wood LED Wall Light

Installation Guide

In the box

1 x wood light bar with integrated 3-colour LED (Pair of 2: two bars) · screws with screw caps · wall plugs · terminal block

You will need

Drill, screwdriver, pencil and spirit level. No globe needed: the LED is built in. Mount it horizontally above a bed, sofa or sideboard, or vertically beside a doorway or on a stair wall.

Important safety information

- This light must be installed by a licensed electrician, in line with AS/NZS 3000 (Wiring Rules) and local regulations.
- Turn the power off at the switchboard before installing, cleaning or servicing the light.
- Use screws and wall plugs suited to your wall (plasterboard, timber or masonry).
- Down Only: fit with the diffuser facing down. Up & Down: diffusers face up and down.
- Works with a standard on/off wall switch.

Step by step

1. **Mark and drill**
   Hold the bar against the wall, check it is level (or plumb for vertical) and mark the two slots on its back. Check for hidden pipes or cables, then drill.
2. **Fix the screws**
   Push in the wall plugs and screw in the two screws with their caps, leaving the caps standing a few millimetres off the wall.
3. **Connect the wiring**
   With the power OFF, connect the supply to the light through the terminal block: Active to L, Neutral to N, and Earth to the earth terminal if one is fitted. Tuck the wires neatly into the wall.
4. **Hang the light**
   Hook the slots on the back of the bar over the screw caps and slide it down until it sits firmly against the wall.
5. **Test**
   Restore the power at the switchboard and switch on the light.

Care and cleaning

Turn the light off. Dust the wood and diffuser with a soft, dry cloth. Do not use water, solvents or abrasive cleaners.
