Orla Mid-Century Glass Flush Mount Ceiling Light

Installation Guide

In the box

1 x ceiling base with G9 lampholder · 1 x ceiling plate · 1 x disc shade with fixing ring · 1 x glass globe · terminal block · screws and wall plugs

You will need

Drill, screwdriver, pencil and stepladder. One G9 globe for the 220 to 240 V supply, small enough to fit the shade, sold separately (warm white LED, 2700 to 3000K, recommended).

Important safety information

- This light must be installed by a licensed electrician, in line with AS/NZS 3000 (Wiring Rules) and local regulations.
- Turn the power off at the switchboard before installing, cleaning or servicing the light.
- Use screws and wall plugs suited to your wall (plasterboard, timber or masonry).
- Glass is fragile: keep the shade safely aside until the last step.
- Use an LED globe and do not exceed the maximum wattage shown on the lampholder.

Step by step

1. **Fix the ceiling plate**
   Undo the two side screws to separate the base from its plate. Mark the holes and screw the plate firmly to the ceiling, into a joist or with suitable anchors, with the supply cable through the centre.
2. **Connect the wiring**
   With the power OFF, connect the supply to the light through the terminal block: Active to L, Neutral to N, and Earth to the earth terminal if one is fitted.
3. **Fit the ceiling base**
   Tuck the wires inside, push the base up over the plate and refit the two side screws until it sits flush with the ceiling.
4. **Fit the disc and globe**
   Slide the disc shade over the lampholder and screw on the fixing ring by hand to hold it. Push a G9 globe straight into the lampholder.
5. **Fit the glass globe**
   Twist the glass globe gently into place until it holds. Do not over-tighten.
6. **Test**
   Restore the power at the switchboard and switch on the light.

Care and cleaning

Turn the light off and let it cool. Remove the shade and wash it in warm soapy water, then dry it fully before refitting. Dust the base with a soft, dry cloth.
