Ravello Up & Down LED Wall Light

Installation Guide

In the box

Stone wall light with integrated LED (22 or 32 cm, Indoor or Outdoor IP65) · wall mounting bracket · wall plugs and screws

You will need

Drill, screwdriver, spirit level and a pencil. Mount at about 150 to 170 cm from the floor in living areas and hallways, or 110 to 130 cm beside a bed.

Important safety information

- This light must be installed by a licensed electrician, in line with AS/NZS 3000 (Wiring Rules) and local regulations.
- Turn the power off at the switchboard before installing, cleaning or servicing the light.
- Use screws and wall plugs suited to your wall (plasterboard, timber or masonry).
- Indoor version: dry areas only. Outdoor IP65 version: suited to exterior walls; seal the cable entry so water cannot run into the wall box.
- Natural stone: each piece varies slightly. Handle the stone with care.

Step by step

1. **Turn off the power**
   Switch off the circuit at the switchboard and check the wall point is dead before you start.
2. **Fix the bracket**
   Hold the bracket level over the wall point, mark the holes, drill and fit the wall plugs, then screw the bracket on with the supply cable through the centre.
3. **Connect the wiring**
   Active to L, Neutral to N and Earth to the earth terminal if present. Check every connection is tight and insulated.
4. **Mount the light**
   Tuck the wires into the wall box, place the light over the bracket and secure it with the screws provided. Support the stone with both hands while you fix it.
5. **Test**
   Restore the power and switch on. The light shines up and down at the same time.

Care and cleaning

Switch off and let it cool. Dust the stone with a soft dry cloth. Avoid water, oil and acidic cleaners, which can mark the natural pores.
