Vane Folded Up & Down Wall Light

Installation & care guide · Aussie Lights

Before you start

- This is a hardwired wall light. In Australia it must be installed by a licensed electrician.
- Turn off the power at the switchboard before installation, cleaning or maintenance.
- Check that the wall can safely hold the light. Use screws and wall plugs suited to your wall (plasterboard, brick or timber).
- Indoor use in dry areas only. In a bathroom, keep it outside the shower and bath zones.
- The LED is built in: there is no globe to fit or replace.

In the box

- Folded metal wall light with integrated LED (warm white 3000K)
- Mounting bracket, screws and wall plugs

Installation steps

1. Unpack the light on a soft surface and check that nothing is missing or damaged before the electrician arrives.
2. Mark the height: the centre of the light is usually 160 to 180 cm from the floor in a hallway or living room, or about 120 to 150 cm beside a bed. The light shines up and down, so leave at least 30 cm clear above and below.
3. Fix the mounting bracket to the wall with the supplied screws, centred over the electrical outlet. Check that it is level.

4. Your electrician connects the light to the mains wiring (active, neutral and earth).
5. Slide the light onto the bracket and tighten the fixing screws. Restore power and test the light.

Care

- Switch off and let the light cool, then dust with a soft dry cloth.
- Do not use water, solvents or abrasive cleaners on the metal finish.
- Contact us if the LED ever stops working: it is covered by our 2-year warranty.
